

Olympus equips healthcare professionals with dictation and workflow solutions that allow more time to be spent with patients, keep information secure, and save time & money.

The DS-9500/DS-9000 paired with ODMS Release 7 software enhances the documentation process by connecting directly to your transcriptionist, or integrating directly with speech recognition software.

The RM-Series Microphones are designed for medical use, with intelligent dual microphones and an antimicrobial housing, and featuring simple, efficient workflow solutions for direct dictation into the healthcare provider's EHR system.
