Professional Smartphone Dictation Application

Dictate, annotate, send - anytime, anywhere.

The updated Olympus Dictation application for iOS and Android allows users to capture recordings on the go – and instantly insert them into their office workflows.

With the Olympus Dictation app, users can create crystal-clear voice recordings anywhere with their smartphone, while benefiting from a wide range of security features to keep files protected. Encrypted dictation files can then be emailed or sent directly into the organization's Olympus Dictation Management System (ODMS) for automatic routing to a transcriptionist, voice recognition software or a secure archive. That means increased efficiency, decreased costs and more done in less time.

A 60-day trial version allows new users to test the app, while the full version is required for full email and integration capabilities. ODMS software sold separately.

FEATURES

- Full integration with Olympus Dictation Management System software

- Professional cloud solution, the Olympus Dictation Management Service (ODDS), manages the transfer of recorded dictations.

- Easily record on the go and push dictations into your organization's workflow while you're out of the office.

- 256-bit encryption keeps files protected throughout the delivery chain.

- Recording in DSS Pro file types enable seamless integration with the industry standard format.

- Available in the App Store and on Google Play.
